3&5 DAY

All your temperature control shipping needs covered in one range.

The ultimate in flexibility with the fewest number of shippers and coolants

Certis 3 & 5 Day are part of the Certis family of premium shippers which are designed for one way shipments of pharmaceutical products. There are 4 sizes, from 6 to 56 liters and all of them are available in refrigerated (2 to 8°C), CRT (15 to 25°C) and frozen (<-20°C).

By changing the outer box, you can quickly move from 3 to 5 Day when you need the extra performance. Both use the same universal pack-out making it easy for your staff. You can also switch from Refrigerated to CRT by simply swapping out the colored PCM bricks. Our patented ZERO Bench-Time® technology eliminates the need for bench conditioning saving you space and time.

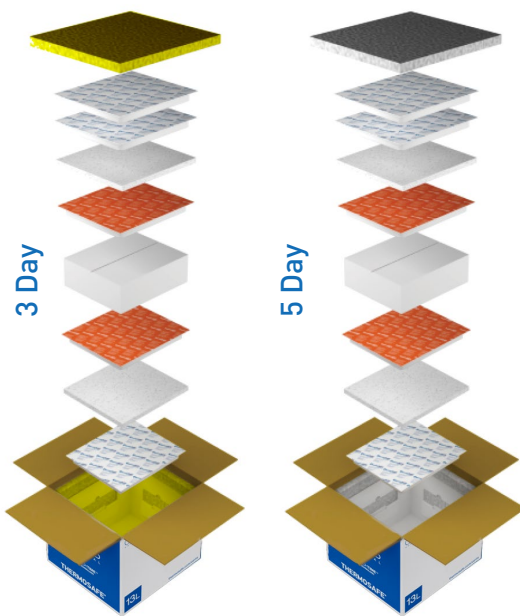

Reduce stock-holding and simplify your operation by switching your one way shippers to Certis.

Introduce the Certis Platform to simplify your business

Embrace Simple® by introducing the Certis 3 & 5 Day range of shippers into your business. We call this range our Certis Platform and you can implement these shippers in a couple of different ways.

You can choose the Certis 3 Day or 5 Day shipper that meets your duration, temperature and payloads needs. Since all Certis shippers are pre-qualified, you can access our qualification data to get you started without delay.

However, if you ship a mix of durations and temperatures, you can fully embrace the simplicity of the Certis Platform. **Let us show you how...**

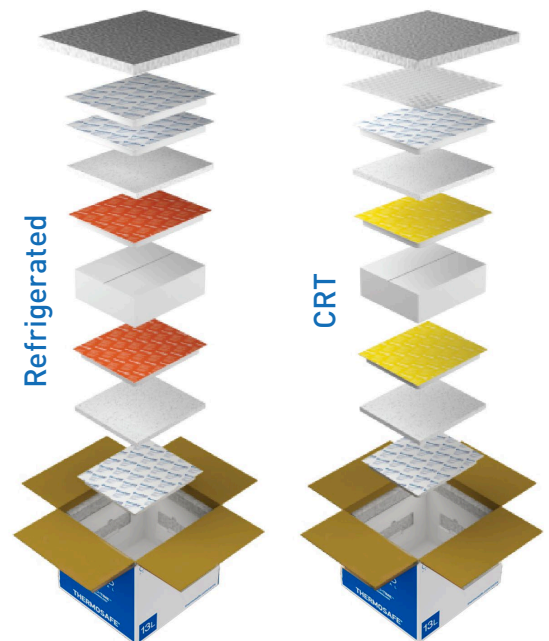

Switching Duration

- Simply change the outer insulated shipper to switch between 3 Day (PUR insulation) and 5 Day (VIPs)
- Identical pack-out, makes it really easy for your packing staff and helps reduce the risk of pack-out errors

Switching Temperature

- Switch between refrigerated and CRT by simply swapping out the colored PCM bricks
- Eliminate the risk of pack-out errors with colour coded PCM bricks: Refrigerated bricks are amber and CRT are yellow
- It's easy to switch to frozen too. Simply retain the payload carton and fill the rest of the payload space with Dry Ice
